

A rainwater harvesting class is scheduled for Tuesday, June 30th from 6:00 pm until 8:00 pm at the [Irma Lewis Seguin Outdoor Learning Center](#) located at 1865 US Highway 90 East, Seguin. Rainwater harvesting captures, diverts, and stores rainwater for later use. Rainwater can be used for landscaping, in-home uses, wildlife, livestock, fire protection, and stormwater management. The class will cover topics such as uses of rainwater and basic system components, as well as a walking tour of the newly installed rainwater harvesting system at the Learning Center. Also, a guest speaker who lives in Seguin will talk about her experience with her own, whole-house, rainwater harvesting system.

And if that isn't interesting enough, attendees will have the opportunity to win a 40 gallon rain barrel to be raffled off as a door prize!

But wait--there's more! By way of introduction to the class, an update on the Geronimo and Alligator Creeks Watershed Protection Plan (GACWPP) will be provided to attendees. The GACWPP is a comprehensive plan to address the elevated concentrations of bacteria and nitrates in the creeks. The Partnership Meeting (partnership = concerned citizens who care about water in the creeks) portion will provide you with information about upcoming workshops, events, and other ways for you to get connected. Come learn how you can become more involved in protecting your area creeks!

There is NO cost to attend but seating is limited, so please RSVP to me in order to ensure adequate materials and meeting space. wling@ag.tamu.edu
