

Interested in learning how to keep your septic system functioning properly?

Attend the Homeowner Maintenance of Systems Course for Free!

The 2 hour course in Seguin provides a basic understanding of the operational and maintenance activities of conventional and aerobic septic systems, and explains how activities within the home impact septic systems. Presentations will cover the treatment processes, health and safety considerations, and an overview of how to inspect and maintain the system. This course also provides answers to the most frequently asked septic system questions, including when to pump out a tank and what can or cannot go down the drain. The 6 hour course in New Braunfels covers the same material as the 2 hour class, but goes more in depth on aerobic systems and their operation and maintenance.

Two different courses are being offered in two different locations. Attend the course offering that fits your needs.
